

ABSTRACT

Methods and chewing gums for delivering a medicament or agent to an individual are provided. The chewing gum includes a medicament or agent. The medicament or agent is present within the chewing gum composition (the water soluble portion and/or
5 insoluble base portion). It has been found that by chewing the gum, the medicament or agent is released from the chewing gum. Continuing to chew the chewing gum creates a pressure within the buccal cavity forcing the agent or medicament directly into the systemic system of the individual through the oral mucosa contained in the buccal cavity. This greatly enhances the absorption of the drug into the systemic system as well as the
10 bioavailability of the drug within the system.
